The Hydraulic CHLOR-SCALE 150™ is designed for monitoring the amount of chemical used and how much remains in 150 lb (68 kg) chlorine and sulfur dioxide cylinders commonly used at water and wastewater treatment plants, well heads, booster stations and industrial plants.

The solid PVC plastic scale platform is corrosionproof and with a low height of only 1 5/8", cylinders can easily be rolled on and off without any lifting. The hydraulic load cell under the platform senses the weight and through a length of PVC coated copper tubing connects to either the Century™ analog dial or SOLO XT™ digital display. Each platform includes a wall mounted chaining bracket that provides security for the cylinder while on the scale platform.

The Century dial requires no power making the whole scale immune to problems that can affect electronic scales such as power failures, damage from lightning strikes or power surges, and electrical interference. A simple tare adjust knob allows easy adjustment of the dial so only the actual chemical weight is displayed.

The SOLO XT display uses the same ultra durable hydraulic load cell but provides a digital weight display. The SOLO XT is available in three different configurations: battery powered, loop powered with 4-20mA output, or loop powered with 4 -20mA output and level alarm output relay.

A full 5-year warranty backs each and every CHLOR-SCALE 150 INCLUDING THE PLATFORM, LOAD CELL AND INDICATOR. NO FINGER POINTING.

Buying a CHLOR-SCALE 150 means buying the best!
